

ENGINEERING • CONTRACTING • SERVICE

“Because you deserve for it to be on-time and done right.”

WHO WE ARE. WHAT WE DO.

Capstone is a company created to serve our community with six areas of excellence essential to becoming the best provider in mechanical systems before, during, and after your installation.

1. ENGINEERING

Every great project begins with a great design. Capstone has a team of professionals and knowledgeable field personnel who collaborate for the best HVAC and plumbing designs for residential, commercial, and industrial applications. As a full service mechanical contractor, and MEP engineering firm, Capstone delivers design/build solutions quickly, economically, and adequately detailed.

2. SALES/ESTIMATION

Capstone is able to readily deliver accurate budgets and proposals to general contractors, home builders, and owners. We take pride in our ability to provide “value engineering” ideas to help an over-budget project meet its goals.

3. INSTALLATION

The installation process is approached as a team effort to include a project manager, field manager, field lead installer, and installation crew. The team focuses on meeting the project schedule safely, thoroughly, and efficiently. Our people are highly trained in the skills of their trade, and the overriding codes and standards ensure the well being of our customers. All employees are drug tested and have undergone a background check to ensure well being to all customers and contacts.

4. QUALITY EQUIPMENT

Capstone is discerning about the brands and types of equipment installed. Manufacturers must have a proven track record of performance, reliability, innovation, and support. We are privileged to be one of the few Carrier Factory Authorized Dealer's in Central Texas for residential products. In commercial products, Capstone uses only the top manufacturers equipment which include companies such as: Carrier, Lennox, Trane®, York®, McQuay®, and Aaon®.

Besides the equipment we purchase from manufacturers, Capstone is proud of the high quality sheet metal products manufactured in our own facility.

5. SERVICE

Servicing and maintaining existing air conditioning and heating systems is a need every business and home owner has on a regular basis. To meet this need, Capstone hires top-performing technicians who are NATE (North American Technician's Excellence) certified. Once a technician is a part of Capstone, he undergoes continual training and testing for skill improvement.

Capstone's goal is to accurately diagnose every problem and to understand it well enough to keep it from happening again. We also offer preventative maintenance agreements to fit the needs of businesses and homeowners.

6. BUSINESS OPERATIONS

“Treat others the way you want to be treated” is a core value at Capstone, and nowhere does this stand out more than in the way the business is operated. This means we choose to work with only top performing companies that have a proven track record of integrity and support. We strive to be a good customer to those who serve us.

"Make me a priority. I need immediate response, not a 'we'll get to you tomorrow' sort of reply."

"I don't have time to deal with things like filter changes, tune-ups, or overall system maintenance. I want someone I can trust to do it for me."

"I need a bid for a new system installment right away. Can you get to it quickly?"

ABOUT THE OWNERS

Leadership is profound to every owner's great success. Capstone believes that leadership starts by serving others. It is only then that one can gain the expertise and experience needed to make sound decisions.

Rick Tullis, P.E., President of Capstone Mechanical, is a graduate from Baylor University with a bachelor of science in mechanical engineering. He began his career by working for The Trane Company where he served in many capacities. He left the corporate world in 2001 to work for a mechanical contractor before becoming a founding partner of Capstone in 2005.

Stefan LeRow, Vice President of Capstone Mechanical, graduated from Texas A&M University with a bachelor of science in engineering technology. He began his career as a field engineer for a large oil well-field services company before transitioning into mechanical contracting in 2000. He was also a founding partner of Capstone in 2005.

"Give me a system that provides overall comfort, one that lasts a long time, and is energy efficient."

Capstone would like for you to join the list of many satisfied customers. We strive to serve our customers with knowledge of our trade and dedicated service. We feel confident in knowing that you will be extremely pleased with our service and quality line of products.

We have purposely chosen to offer multiple ways for you to experience top-notch delivery of the most well thought out mechanical and plumbing systems you could own. Only then can we exceed your expectations of what a cooling and heating contractor can provide.

At Capstone, we believe in "treating others as you would like to be treated." It is with sincere hope that Capstone will be allowed the opportunity to serve you in the near future.

Best Regards,

 Rick Tullis, P.E.
 President

Engineering • Contracting • Service

“Some ingredients you just can’t live without.”

THREE KEY INGREDIENTS

In a simplified form, it takes three key ingredients to create an outstanding heating, ventilating, and air conditioning system or plumbing system for a facility. These three ingredients are:

- 1. Engineered Design**
- 2. Quality Controlled Installation and Service**
- 3. Top-rated Equipment**

As a consumer, always ask the contractor about these three key ingredients. If the contractor cannot provide a detailed design before he starts the work, or if he doesn't have a quality control process, you run the risk of getting a system that does not meet your needs. Similarly, if the contractor does not represent a respected line of equipment, then you're running the risk of having equipment in your building for the next 10 to 15 years that does not give you the performance you expect. At Capstone, we are pleased to provide our customers with all the ingredients needed to make each air conditioning and heating system an “outstanding” system.

PRODUCTS AND SERVICES WE OFFER

- Design/build and engineering of all types of HVAC and plumbing systems
- Large and light commercial HVAC and plumbing contracting
- Sheet metal fabricating
- Test & air balancing, and commissioning
- Pipe fitting and welding
- Industrial process heating and cooling
- Building automation system design and installation
- Boiler repairs and replacement
- Computer room/data center cooling design and installation
- Utility rebate acquisition
- Service and repair of all brands and types of cooling and heating systems
- Replacement of existing cooling and heating systems
- Indoor air quality services
- Preventative maintenance service contracts

Where engineered designs, quality installations, industry leading equipment, and outstanding service come together.
